SETUP

1. READ THE SCENARIO

It sets out your objectives, the victory conditions, and any special rules.

2. DEPLOY UNITS

Roll a D6 to see who deploys first, then take turns placing one unit each.

3. DISTRIBUTE EQUIPMENT

Once all units are deployed, use your equipment points to arm them.

GAME PHASES

The game is divided into rounds, each consisting of two phases:

1. **INITIATIVE PHASE**
2. **TACTICAL PHASE**

INITIATIVE PHASE: Roll a D6 to see who goes first. The player with the highest roll takes the first turn that round. In the first round, roll before deploying units to determine both the deployment order and who goes first. If there's a tie, both players re-roll until one wins.

TACTICAL PHASE: Activate units and perform actions during this phase.

END OF THE ROUND:

After the Tactical Phase, apply all unit effects that activate at the end of the round, then apply scenario effects (if any), and calculate Victory Points (VP).

NEW ROUND:

Start a new round following the same phases.

FINAL ROUND:

If this was the final round, determine the winner based on the conditions specified in the scenario.

GAME PHASES OVERVIEW

UNIT ACTIVATION

Each player takes turns activating one unit.

Once activated, a unit with the corresponding token can perform actions using Action Points (AP):

MOVE

SHOOT

RELOAD

OVERWATCH

MELEE COMBAT (if there are enemy units within melee range)

ENGAGE

DISENGAGE FROM MELEE LOCK (if the unit is within the melee range of an enemy unit)

USE ABILITY (if the unit has an ability)

USE EQUIPMENT (if the unit has equipment)

INTERACT WITH MAP OBJECTS (e.g., doors)

PASS (skipping a turn without triggering Overwatch)

After performing an action, flip the activation token to indicate that the unit can no longer perform actions in this round. At the start of a new round, flip all tokens back to the side to indicate that the unit can be activated.

**THE UNIT CAN BE ACTIVATED
IN THIS ROUND.**

**THE UNIT HAS ALREADY BEEN
ACTIVATED IN THIS ROUND.**

ACTION POINTS (AP)

Each unit has 2 Action Points (AP).

Every action costs a specific number of AP (except for picking up items from the ground and opening/closing doors, which have special rules).

Some units have abilities that give extra AP to another friendly unit.

VICTORY POINTS (VP)

Victory Points (VP) are earned by capturing points on the map and completing contracts. At the end of the game, the player with the most VP wins.

VP tokens indicate the number of VP a player receives at the end of a round.

To capture a VP, a unit must be within 1 inch of the VP token with no enemy units in that radius. If both allied and enemy units are present within this radius at the end of the round, the point becomes contested, and no player receives VP from it.

In this example, Unit 1 is allied, and Units 2 and 3 are enemies. This point is contested.

In this example, Unit 1 is allied and controls the point.

UNIT ATTRIBUTES

**COMMANDER
RICKMAN**

HP	A		M
9	3	4	6

LEADER: The player gains 2 re-roll points at the start of each round.

PISTOL

		AP		AP			
6	5	1	3	1	+1	1	2

VOLT SWORD

		AP			
1	4	1	0	2	3

WEAPON ABILITY: When rolling for armor penetration, re-roll each die that shows a 1 until it shows a higher value.

HEALTH, AGILITY, ARMOR, AND MOVEMENT RANGE are the main attributes of a unit. The parameters for the unit's ranged and melee weapons are listed below these primary attributes.

HP	A		M
9	3	4	6

THESE CONSTITUTE THE CORE CHARACTERISTICS OF A CHARACTER.

HEALTH

HP

Unit health icon.

9

Number of unit health points.

The health value shows the number of health points the unit has. One point of damage removes one health point. When the health value drops to zero, the unit is killed, and its model is removed from the field.

ARMOR

Unit armor icon.

4

Unit armor value.

The armor value shows how difficult it is to penetrate the unit's armor in ranged and melee combat, and is used when making armor penetration checks against the unit.

AGILITY

A

Unit agility icon.

3

Unit agility value.

The agility value shows how difficult it is to hit the unit in ranged and melee combat, and is used when making hit checks against the unit.

MOVEMENT RANGE

M

Unit Movement Range icon.

6

Unit Movement Range in inches.

The Movement Range value shows the maximum distance the unit can move in inches for 1 AP.

MOVEMENT

Movement is measured using an inch ruler. The standard movement distance for 1 AP is 6 inches. Measurement is taken from the base of the unit, which is placed at the edge of the point up to 6 inches away.

Each unit has one of three Movement Ranges:

SLOW: 5 INCHES
STANDARD: 6 INCHES
FAST: 7 INCHES

To move through a friendly unit, subtract 2 inches from the Movement Range.

Example of moving through a friendly unit: Subtracting the 2-inch penalty from the standard Movement Range of 6 inches leaves 4 inches of movement through the friendly unit.

If Unit 1 needs to move between a friendly Unit 2 and full cover (a wall), the distance between Unit 1 and the cover must be at least 1 inch. If the distance between Unit 2 and the cover is less than 1 inch, this movement counts as moving through a friendly unit.

To move through partial cover, subtract 1 inch from the Movement Range.

Example of moving through partial cover: Subtract the 1-inch penalty from the standard Movement Range of 6 inches. That leaves 5 inches of movement through partial cover.

If movement would end on a friendly unit or partial cover, place the unit directly in front of the obstacle.

If the movement ends beyond a friendly unit or partial cover, and it's not possible to place the unit within 4 or 5 inches, place it farther than 4 or 5 inches, next to the friendly unit or partial cover that blocked the movement.

RANGED WEAPONS

There are various types of ranged weapons, each with its own parameters and special features.

Every weapon profile includes its range, number of shots, ammunition capacity, AP cost for shooting, AP cost for reloading, armor penetration strength, damage per shot, and critical damage per shot.

PISTOL							
6	5	1	3	1	+1	1	2

SHOTGUN							
5	2	1	2	1	-1	3	4

RIFLE							
7	3	1	2	1	0	2	3

HEAVY WEAPON							
8	4	2	1	1	-2	2	3

SHOOTING RANGE

Shooting range icon.

6

Shooting range in inches.

The range is measured using an inch ruler. Each ranged weapon profile has its own shooting range, measured from the base of the unit. If the measurement reaches the base of the Target, it is considered within range, and the unit can open fire, provided the Target is in line of sight and nothing blocks the shot.

Shooting examples:

If the Target is behind full cover (impassable terrain such as walls, columns, etc.), shooting is possible only if 50% of the Target's base is in direct line of sight.

For example, a 28mm base needs at least 14mm visible to the shooting unit.

Here, only Unit 1 has a direct line of sight to the Target and can open fire.

NUMBER OF SHOTS

Shots icon.

5

Number of shots.

The number of shots shows how many dice to roll for the shooting check.

ACTION POINTS (AP) FOR SHOOTING

Shooting AP cost icon.

1

Number of AP needed for shooting.

The number of AP shows the amount of AP needed to perform the shooting action.

AMMUNITION

Ammunition capacity icon.

3

Ammunition capacity value.

After shooting, subtract 1 from the indicated ammunition capacity value. For example, a weapon with 3 ammunition has 2 remaining after firing. Place a corresponding ammunition token next to the unit to track how much ammunition is left. The unit must always have at least 1 ammunition to perform the shooting action. Subtract 1 from the current ammunition value after each shooting action.

If the ammunition value is 0, the unit cannot shoot until it reloads.

THE UNIT HAS 2 POINTS OF AMMUNITION LEFT

THE UNIT HAS 1 POINT OF AMMUNITION LEFT

THE UNIT HAS 0 POINTS OF AMMUNITION LEFT

ACTION POINTS (AP) FOR RELOADING

Reload AP cost icon.

1

Number of AP needed for reloading.

To reload, spend the amount of AP specified for reloading. The weapon's ammunition is then restored to the maximum value indicated in its ammunition parameter.

ARMOR PENETRATION

Armor penetration icon.

+1

Armor penetration value.

The armor penetration strength of a weapon is calculated based on its armor penetration value.

A value with a "+" sign means you need to add the weapon's armor penetration value to the Target's armor value.

A value with a "-" sign means you need to subtract the weapon's armor penetration value from the Target's armor value.

A value with a "0" sign means you don't need to add or subtract anything from the Target's armor value.

For example, if the Target has an armor value of 4 and the weapon has an armor penetration of +1, add 1 to the Target's armor value of 4. When shooting with this weapon, the Target's effective armor value becomes 5, so the weapon is less effective at penetrating armor.

By contrast, if the weapon's armor penetration is -2, subtract 2 from the Target's armor value. When shooting with this weapon, the Target's effective armor value becomes 2, so the weapon is more effective at penetrating armor.

DAMAGE

Damage icon.

1

Damage value.

The standard damage value shows the amount of damage inflicted by a shot that successfully hits and penetrates armor.

CRITICAL DAMAGE

Critical damage icon.

2

Critical damage value.

The critical damage value shows the amount of damage inflicted by a shot that rolled a 6 on the damage check.

OVERWATCH

A unit in Overwatch mode holds its fire and waits. If an enemy unit moves into its shooting range, or takes action while already inside that range, the Overwatch unit opens fire before the enemy unit completes its action.

To activate Overwatch, a unit must spend 1 AP, have at least 1 ammunition, and be outside melee range of an enemy unit. To show that a unit is in Overwatch mode, place an Overwatch token next to it. Once the token is placed, the unit cannot take any other action for the rest of the round.

A unit leaves Overwatch mode as soon as it fires or takes damage. After that, its token needs to be removed.

Any units still in Overwatch at the end of the round leave it as well, and all remaining tokens are removed.

OVERWATCH TOKEN

Unit 1 is in Overwatch mode, and Target enters Unit 1's shooting range. Target stops because Unit 1 opens fire.

After Unit 1 shoots, the Overwatch token is removed, and Target can continue its actions.

Unit 1 is in Overwatch mode, and Target is already within Unit 1's shooting range when it declares an action (e.g., opening fire on Unit 1 or starting movement). Unit 1 opens fire before Target acts.

After Unit 1 shoots, the Overwatch token is removed, and Target can perform its previously declared action.

Actions that trigger Unit 1 to open fire before Target's declared action:

SHOOTING
MOVEMENT
MELEE COMBAT
DISENGAGING FROM MELEE LOCK
ESCAPING FROM MELEE LOCK
USING EQUIPMENT
RELOADING

Overwatch fire follows the normal shooting rules: line of sight, ammunition, etc.

Unit 1 is in Overwatch mode. Target starts moving and enters Unit 1's shooting range but stops behind full cover (impassable terrain).

Under the normal shooting rules, Target is not in Unit 1's line of sight, so the movement does not trigger Overwatch. Target then throws a grenade, dealing damage to Unit 1.

Unit 1 has taken damage, so the Overwatch token is removed and Unit 1 is no longer in Overwatch mode.

Unit 1 is in Overwatch mode. Target uses Engage. Unit 1 opens fire on Target first, then the Overwatch token is removed, and Target enters melee combat.

PARTIAL COVER

Partial cover is any terrain object on the field that does not exceed the height of the units. Objects taller than the units count as full cover and are impassable. To move through partial cover, subtract 1 inch from the Movement Range. When shooting at a Target behind partial cover, or with partial cover on the line of fire, the Target's agility increases by 1 for each piece on that line.

A unit's agility cannot exceed 5, regardless of the number of bonuses applied.

Unit 1 opens fire on Target, which is behind partial cover. Target's agility without cover is 3, so in this case, its agility becomes 4.

Unit 1 opens fire on Target. It is not behind partial cover, but partial cover is on the line of fire, so Target's agility still increases by 1.

If partial cover stands between a shooting unit and its Target, and the unit is within 1 inch of that cover, the unit counts as being behind it and can shoot without interference.

If more than half of the Target's base is visible past the edge of the partial cover, the Target does not count as being behind it and receives no agility bonus.

On a 28mm base, that means more than 14mm visible to the shooting unit.

Unit 1 can shoot at both Target 1 and Target 2. The cover does not interfere with the shot at Target 1, but interferes with the shot at Target 2, because it is more than 1 inch away.

Unit 1 opens fire on Target. Target is not behind partial cover, but two pieces of partial cover are on the line of fire. Unit 1 is within 1 inch of piece 1, so piece 1 does not interfere with the shot. However, piece 2 does interfere and grants an agility bonus to Target.

Unit 1 opens fire on Target. Target is not behind partial cover, but two pieces of partial cover are on the line of fire. Unit 1 is within 1 inch of piece 1, so piece 1 does not interfere with the shot. However, piece 2 does interfere and grants an agility bonus to Target.

When shooting through partial cover, measure the distance to the cover in the direction of the Target. If the cover is within 1 inch, it does not interfere with the shot.

SHOOTING THROUGH FRIENDLY UNITS

A Target behind a friendly unit can still be shot at, but its agility increases by 1.

A unit's agility cannot exceed 5, regardless of the number of bonuses applied. A Target with a base agility of 5 receives no bonus.

Friendly fire will not occur if 50% of the Target's base is in direct line of sight. For example, a 28mm base needs at least 14mm visible to the shooting unit.

MELEE WEAPONS

There are various types of melee weapons, each with its own parameters and, in some cases, special features. Every weapon profile includes its melee range, melee strength, AP cost for melee combat, armor penetration strength, damage per hit, and critical damage per hit.

VOLT SWORD					
					
1	4	1	0	2	3

WEAPON ABILITY: When rolling for armor penetration, re-roll each die that shows a 1 until it shows a higher value.

MELEE RANGE

	Melee range icon.
1	Melee range in inches.

The range is measured using an inch ruler. Each melee weapon profile has its own melee range, measured from the base of the unit. If the measurement reaches the base of the Target, it is considered within melee range.

MELEE STRENGTH

	Melee strength icon.
4	Melee strength value.

Melee strength shows the number of attacks, meaning how many dice to roll in melee combat. The defender rolls dice equal to its melee strength when blocking those attacks. Melee strength also indicates the value the opponent must roll on a single die to disengage from Melee Lock.

ACTION POINTS (AP) FOR MELEE COMBAT

	Melee AP cost icon.
1	Number of AP needed for melee combat.

The number of AP shows the amount of AP needed to perform melee combat.

ARMOR PENETRATION

	Armor penetration icon.
0	Armor penetration value.

The armor penetration strength of a weapon is calculated based on its armor penetration value.

A value with a "+" sign means you need to add the weapon's armor penetration value to the Target's armor value.

A value with a "-" sign means you need to subtract the weapon's armor penetration value from the Target's armor value.

A value with a "0" sign means you don't need to add or subtract anything from the Target's armor value.

For example, if the Target in melee combat has an armor value of 4 and the weapon has an armor penetration of +1, add 1 to the Target's armor value of 4. When engaging in melee combat with this weapon, the Target's effective armor value becomes 5, so the weapon is less effective at penetrating armor.

By contrast, if the weapon's armor penetration is -1, subtract 1 from the Target's armor value of 4. When engaging in melee combat with this weapon, the Target's effective armor value becomes 3, so the weapon is more effective at penetrating armor.

MELEE DAMAGE

Melee damage icon.

2

Melee damage value.

The standard damage value shows the amount of damage inflicted by a hit that successfully passes both the hit and armor penetration checks.

MELEE CRITICAL DAMAGE

Melee critical damage icon.

3

Melee critical damage value.

The critical damage value shows the amount of damage inflicted by a hit that rolled a 6 on the damage check.

SPECIAL FEATURES

Melee weapons may have additional special features. If a weapon has special features, they are described below its main parameters.

ENGAGE

Engage is a boosted movement toward the Target that ends in melee combat.

COST OF ENGAGE:

2 AP

MOVEMENT RANGE

BONUS DURING ENGAGE:

+2 INCHES

For example, a unit with a movement range of 6 inches moves up to 8 inches. Melee combat begins once it reaches the Target.

All standard penalties for moving through partial cover or friendly units apply.

The measurement to the Target must reach its base, just as with shooting. If it does not reach the base, Engage is not possible.

MELEE RADIUS IMPACT

The melee range value also acts as a radius around the unit. Enemy units inside that radius are automatically in melee combat with that unit. They cannot shoot or perform other actions, except taking part in melee combat or using movement to leave the melee radius.

Unit 1 is in melee combat with Target 1 and Target 2 — in Melee Lock with Target 1, and in ordinary melee combat with Target 2. All three units can only fight in melee or leave melee combat. Target 2 can leave using ordinary movement. Unit 1 and Target 1 are in Melee Lock because their bases touch, so they can leave only by using Disengage or Escape from Melee Lock. No other actions are available to these units while they are engaged in melee combat.

MELEE COMBAT

Melee combat begins when two or more enemy units enter the melee radius, which is usually 1 inch. Inside the melee radius, units cannot use ranged weapons, equipment, or any abilities that melee combat blocks.

To leave melee combat, spend 1 AP on movement and move out of the melee radius. Melee Lock is the exception: leaving it requires Disengage or Escape from Melee Lock.

MELEE LOCK

Two units are in Melee Lock when their bases touch. A unit can be in Melee Lock with several enemy units at once.

Melee Lock follows the same rules as melee combat, but it is harder to leave: instead of simply moving out, a unit must use Disengage or Escape from Melee Lock.

DISENGAGING FROM MELEE LOCK

COST OF DISENGAGE FROM MELEE LOCK: 1 AP

To leave Melee Lock, roll a D6 against the enemy unit's melee strength. If the roll matches or beats that value, the unit breaks away and moves a distance equal to its movement range.

If the roll is lower, the attempt fails. The unit stays where it is, and the enemy unit immediately attacks it in melee combat without spending AP. For this attack only, the unit that failed the check has its melee strength reduced by 1.

Unit 1 is in melee combat with Target 1 and Target 2, but in Melee Lock only with Target 1, whose melee strength is 4. Unit 1 rolls one D6 and needs a 4 or higher to break away. No roll is needed against Target 2, since their bases do not touch.

A unit in Melee Lock with several enemy units rolls one D6 against each of them in turn, and must succeed against every one to break away.

ESCAPING FROM MELEE LOCK

COST OF ESCAPE FROM MELEE: 2 AP

Escape from Melee Lock works the same as Disengage from Melee Lock, but even if the roll fails and the enemy unit attacks, the unit still escapes and moves a distance equal to its movement range.

EQUIPMENT

Equipment is additional portable gear that a unit receives before the game begins. Players start with 4 equipment points, which can be spent on medkits or grenades, unless a unit's rules restrict this.

NUMBER OF EQUIPMENT POINTS: 4

EQUIPMENT COSTS:

GRENADE: 2 POINTS

MEDKIT: 2 POINTS

GRENADE TOKEN

MEDKIT TOKEN

Unless its rules say otherwise, a unit can carry only one piece of equipment: either one grenade or one medkit.

If a unit carrying equipment is killed, the token stays on the ground where it died, and any unit without equipment of its own can pick it up.

GRENADE

COST OF THROWING

A GRENADE: 1 AP

A grenade can be thrown up to 5 inches, measured from the base of the throwing unit. Place the token at any point within that distance.

If the throw ends on an enemy unit, friendly unit, or partial cover, the token is always placed at a shorter distance, meaning less than 5 inches.

If the throw ends beyond an enemy unit, friendly unit, or partial cover, and the token cannot be placed within 5 inches, place it farther than 5 inches, next to the unit or cover that blocked the throw.

The blast radius of the grenade is 2 inches, measured from the edge of the token.

The grenade affects all units within its blast radius, including friendly units. A unit is within the blast radius if the measurement from the grenade token reaches its base.

The grenade completely ignores partial cover and agility. Any unit within the blast radius immediately makes an armor penetration check.

If a unit is behind full cover but within the blast radius, make a line of sight check as with shooting to determine whether the fragments reach it. The check is made from the grenade token instead of the shooting unit.

Unit 1 throws a grenade. Unit 2 is within the blast radius and undergoes a check. Unit 3 is outside the blast radius and does not. Unit 4 is within the blast radius, but full cover stands between it and the grenade token. Less than 50% of Unit 4's base is visible from the token, so the fragments cannot reach it and Unit 4 undergoes no check.

Unit 1 throws a grenade. Unit 2, Unit 3, and Unit 4 are within the blast radius, and all undergo a check, since the grenade completely ignores partial cover.

GRENADE THROW EXAMPLE

GRENADE					
5	2	1	-1	1	2

To determine the damage from the explosion, roll 2 dice for each unit within the blast radius and compare the results with that unit's armor value.

Unit 1 throws a grenade. Unit 2 and Unit 3 are within the blast radius and need to make checks.

Unit 2 and Unit 3 have an armor value of 4, and the grenade has an armor penetration of -1, so a roll of 3 or higher is needed to penetrate.

Unit 2 takes no damage because its rolls are lower than 3.

Unit 3 rolls 4 and 6. Both are 3 or higher, so the armor is penetrated twice. The 6 counts as critical damage. Unit 3 takes 3 damage in total: 1 point for the 4, which is the grenade's normal damage, and 2 points for the 6, which is critical damage.

MEDKIT

A medkit restores 2 HP, but never above the unit's maximum HP. A unit with a medkit can use it on itself or on a friendly unit within 1 inch once during its activation. Using a medkit costs no AP. Each medkit works only once, so remove its token from the field after use.

Unit 1 has a medkit and can use it on itself, on Unit 2, or on Unit 3, since both are within 1 inch.

ITEM PICKUP

When a unit carrying equipment is killed, its grenade or medkit stays on the ground where it fell. Any unit not already carrying equipment can pick it up.

Picking up items costs no AP, but the unit must be within 1 inch of it.

Unit 1 spends 1 AP to move within 1 inch of a grenade lying on the ground and picks it up for free. With its remaining AP, Unit 1 can throw the grenade or take any other action costing 1 AP.

OPENING AND CLOSING DOORS

Opening or closing a door costs no AP, but the unit must be within 1 inch of the doorway. A unit farther away spends 1 AP to move within 1 inch first. Each unit can open or close a door only once per activation.

DOOR BLOCKING

If a unit is within 1 inch of the doorway, the door is considered blocked.
A unit from the opposing team cannot open or close a blocked door.

If two or more units from different teams are within 1 inch of the same doorway, the door is considered blocked for everyone, and no unit can open or close it.
This applies regardless of which side of the door each unit stands on.

SHOOTING EXAMPLE

Unit 1 opens fire on Target with a shotgun.

1 1. Check that there is enough ammunition to shoot. Unit 1 has not fired yet, so it has full ammunition.

Check that there is enough AP for the shot. Unit 1 was just activated this round and has 2 AP.

2 2. Check the range to Target. The range is less than 5 inches, so the shotgun can reach Target.

3 3. Check Target's agility. Roll 3 or higher to hit.

4 4. The shotgun has 2 shots, so roll 2 dice to check for hits. The rolls are 3 and 4. Both rolls beat Target's agility, so both shots hit.

5 5. Before the armor penetration check, compare the shotgun's penetration value with Target's armor value. Target's armor value is 4, and the shotgun's penetration is -1. This means Target's effective armor value against the shotgun is 3 ($4 - 1 = 3$). Roll 3 or higher to penetrate.

6 6. Both shots hit Target, so roll 2 dice to check for armor penetration. The rolls are 3 and 6. Both shots penetrate the armor, since Target's effective armor value is 3.

7 7. Determine the damage from those same rolls (3 and 6). The 3 indicates normal damage, since every roll except a 6 is normal damage. The 6 is critical damage.

8 8. Check the shotgun's damage values for each type of hit. The shotgun deals 3 normal damage and 4 critical damage, giving a total of 7 ($3 + 4 = 7$). Subtract 7 from Target's HP, leaving Target with 2 HP ($9 - 7 = 2$).

MELEE COMBAT EXAMPLE

Melee combat is different from shooting: both the armor and agility of the Target are involved, as well as its defense (the Target rolls dice equal to its melee strength).

Unit 1 spends 1 AP to move into melee range of Target, and then spends another 1 AP to attack.

Unit 1 attacks with a combat knife, while Target defends with a Volt Sword.

WEAPON ABILITY: When rolling for armor penetration, re-roll each die that shows a 1 until it shows a higher value.

- 1** 1. Check that there is enough AP to attack. Unit 1 has just moved for 1 AP and has 1 AP remaining.
- 2** 2. Check Target's agility. Roll 3 or higher to hit.
- 3** 3. Unit 1, as the attacker, rolls dice equal to its melee strength. It has 2 dice, so Unit 1 makes 2 attacks with the combat knife.
- 4** 4. Target, as the defender, rolls dice equal to its melee strength. It has 4 dice, so Target rolls 4 dice against those attacks.

- 5** 5. Compare the values on the attacker's and defender's dice. Each attack can be blocked only by a die with a value that matches or exceeds the attacker's die value. Here, only the attack of 3 is blocked, since the defender has a die of equal or higher value. The attack of 5 is not blocked, so only one of the hits gets through.
- 6** 6. Make an armor penetration check.
- 7** 7. If the armor is penetrated, determine damage.

CONTRACTS

If the difference in VP between players is 1 or more at the end of any round, the player with the lower VP receives a contract.

That player draws one contract card and looks at it secretly. The card specifies one unit name from each available faction, and the Target is the unit from the faction the opponent is playing. If that unit is already dead, the player shows the card to the opponent, places it at the bottom of the deck, and draws another.

A contract is fulfilled once the Target is eliminated, whether by the player, by scenario events, or by any other means. The player announces it, shows the card to the opponent, adds the VP specified on the card to their score, and discards it.

OBJECTIVES OF THE CONTRACT

EXAMPLE: At the end of round 2, Player A has 2 VP and Player B has 3 VP.

Before the start of round 3, Player A receives one contract.

Player B is playing the Ulfari, so Player A's Target is the unit Shade.

If Shade is eliminated by Player A or by any other means, Player A gains 1 VP.

RE-ROLL

A re-roll is a chance to repeat an entire roll, not just one die. Each re-roll costs 1 re-roll point.

Re-roll points come from two sources. A player whose Leader is alive gains 2 re-roll points at the start of each round, and stops gaining them once that unit is killed. A player also gains 1 point immediately each time one of their own units is killed.

Re-roll points cannot be spent on the initiative roll, which decides who goes first in the round, or on event cards that call for a roll.

In melee combat, the attacker can re-roll the hit check only before the defender rolls to block.

SCENARIO «CORE OF THE MACHINE»

CORE OF THE MACHINE: The action takes place inside a long-abandoned and heavily damaged space drifter. Your mission is to infiltrate and take full control of the ship. As soon as your team reaches the machine's core, it activates security protocols. However, due to severe damage, the machine cannot distinguish between friend and foe. You also discover that you are not alone. A countdown begins, and there isn't enough time to escape the ship. You need to reprogram the "core" to mark your team as "friendly" and the opposing team as "hostile," thereby activating automatic turrets to eliminate the enemy. If neither team succeeds in persuading the "core", both teams will be marked as "hostile" and will be destroyed when the time runs out.

GAMEPLAY MECHANICS: At the start of each round, draw a random "Core of the Machine" activation card with negative effects for one or more of the three rooms (effect descriptions are on the card).

Victory Conditions:

1. Eliminate all enemy units.
2. Accumulate more VP than the opponent to sway the "Core of the machine" to your side.

If both teams have the same number of VP at the end of the game, everyone perishes as the "core" marks everyone as "hostile" and destroys them.

RANDOM VP PLACEMENT

The random VP placement system applies to all scenarios. Before the game begins, roll one D6. The result determines the VP placement for that game. The diagrams below use the scenario "Core of the Machine" as an example. **BOARD SIZE 33" X 24"**

PROTOCOL CARDS

PROTOCOL "MAGNET"

THE FLOOR IN THE ROOM
BECOMES HEAVILY MAGNETIZED.
MOVEMENT BECOMES DIFFICULT.
